Happiness at work writing :

1/ What would make you happier at university ?

When i start the university i was completely lost , i was thinking about how keep focus and study. The times was passed and i found. Many things so today. I can say that .

The things can make me happier at university , is the ice breaker between the differents sections of study , and so can comunicate with the differents people inside the school.

Allow more connexion between others. And organized more things with class for increasing the relation between collaborators

2/ Describe your ideal workplace.

It's a large space with access to the sea or a place with water , with places where we can distract ourselves and focus on ourselves. Inside a open space with possibility to contact the other only by the sound or the eyes. And maybe a workplace comfy, and enjoyable

3/ Do you prefer studying at home or at university ? Why ?

I prefer study at home same if it's little more complicate cause, it's allow me to accept what i do , in university there is break between differents courses , in home we can focus on what we do during a long time, without break and take the break when we want.

4/ Would you prefer teleworking or working in an office? Why ?

In associated with the lastly question i prefer teleworking and working in office for both reasons :

-teleworking give more time for myself and no external distraction can come (i can work on a project during a really long time)

-working get more attention of me and need to don't be focus. If i try to work i will be more complicate in office but it's a good way to work too for me cause we can so talk about what problems we are on a precise project etc ...
